

Recap - Variables

```
1  name = input("What's your name?")  
2  print("Nice to meet you " + name + "!!")
```

Let's remind ourselves what this code does!

Coding Task – 20 minutes

Choose the task you feel most confident with!

Option 1: Implement 2 variables **other than name** and try to create a mini conversation

Option 2: Implement 1 variable **other than name** in your conversation programs

Option 3: Implement the “name” variable and try changing the printed message while still using the name variable.

```
1  name = input("What's your name?")
2  print("Nice to meet you " + name + "!!")
```

Python Lesson 4

Miss Wallace

"Making Decisions with Computers"

Starter

- To think about: Can computers make decisions? If so, what kinds of decisions do computers make? Or, is it really a human behind every decision?

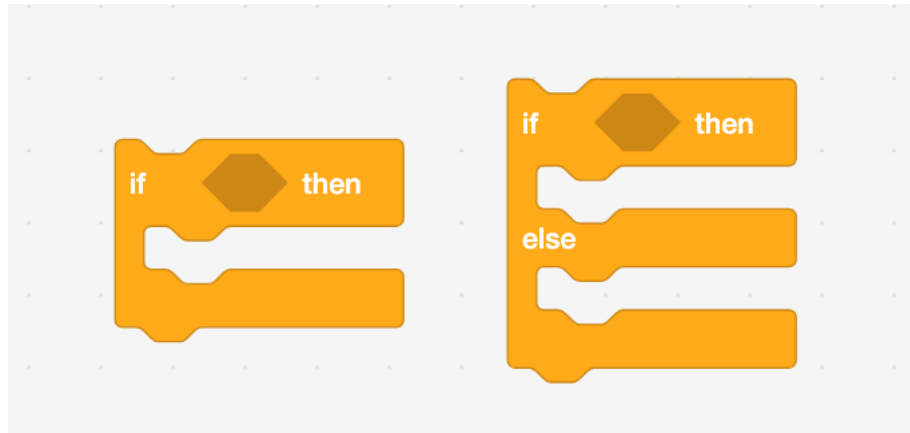

Lesson Aims

- I can consider the thought process behind making decisions in my own life
- I can model a decision-making process using an if/else structure within a Python program
- I can recognise real-world uses of if/else logic in modern applications

Aim for today

We are going to create a program that can:

- 1) Ask a question (lesson 2)
- 2) Look at the answer (lesson 3)
- 3) Give a response based on the answer (lesson 4 – today!)

Let's look at what we've got so far!

```
1  name = input("What's your name?")
2  print("Nice to meet you " + name + "!!")
```

Let's look at what we've got so far!

How do we ask a question?

```
1  name = input("What's your name?")  
2  print("Nice to meet you " + name + "!!")
```

Let's look at what we've got so far!

How do we ask a question?

```
1  name = input("What's your name?")
2  print("Nice to meet you " + name + "!!")
```

Let's look at what we've got so far!

How do we look at the answer?

```
1  name = input("What's your name?")  
2  print("Nice to meet you " + name + "!!")
```

Let's look at what we've got so far!

How do we look at the answer?

```
1 name = input("What's your name?")  
2 print("Nice to meet you " + name + "!")
```

How do we make decisions?

- At lunchtime, will you wear a coat?

How do we make decisions?

- At lunchtime, will you wear a coat?
- Would your answer change if I was asking you this in June?

How do we make decisions?

- At lunchtime, will you wear a coat?
- Would your answer change if I was asking you this in June?
- With a partner, come up with 3 factors that influence your decision to wear a coat or not.

How do we make decisions?

- At lunchtime, will you wear a coat?
- Would your answer change if I was asking you this in June?
- With a partner, come up with 3 factors that influence your decision to wear a coat or not.
- Can we write a rule to describe this decision-making process?

If/else statements in Python

- In Python, we use if/else statements to make decisions.

```
1  name = input("What's your name?")
2
3  ✓ if name == "miss wallace":
4      |     print("You have the same name as me!")
5  ✓ else:
6      |     print("That's a nice name!")
```

If/else statements in Python

```
1 animal = input("What kind of animal is Shrek?")
2
3 ✓ if animal == "ogre":
4     |     print("Correct!")
5 ✓ else:
6     |     print("Nope that's not correct. Shrek is an ogre.")
```

If/else statements in Python

```
1 animal = input("What kind of animal is Shrek?")
2
3 ✓ if animal == "ogre":
4     |     print("Correct!")
5 ✓ else:
6     |     print("Nope that's not correct. Shrek is an ogre.")
```

We are **deciding** if the user's answer is correct!

Coding

- Add in an if/else statement to your conversation programs.
- If you get finished, try and create a full conversation with as many questions as you can! You could try creating a quiz and swapping this with a partner.

Computers making decisions in the real-world

- Think about when you do lunches at the start of the day – you'll need to remind me of the colours here!
- Let's come up with a rule for this!

Discussion

- When you write an if/else statement, are you making the decision, or is the computer?
- Tell me your thoughts!

Discussion

- What are your final thoughts about computing and decision-making?
 - Tell me your thoughts!
-
- The last thing for today is to fill out your exit question. Thank you all for taking part 😊
